- D. To extract the data from several tables in a database, ready to be imported or loaded.

Answer: B,C

NEW QUESTION: 2

Which of the following statements are true about a smartphone? Each correct answer represents a complete solution. Choose two.

- A. It can be simple software-based Softphones or purpose-built hardware devices that appear much like an ordinary telephone or a cordless phone.
- B. It is a mobile phone with advanced PC like capabilities.
- C. It allows telephone calls to be made over an IP network.
- D. It allows the user to install and run more advanced applications based on a specific platform.

Answer: B,D

Explanation:

A smartphone is a mobile phone that offers more advanced computing ability and connectivity than a contemporary basic feature phone. A smartphone is a mobile phone with advanced PC like capabilities. Blackberry and iPhone are the two most popular brands of smartphones. It

allows the user to install and run more advanced applications based on a specific platform.

Answer options C and B are incorrect.

An IP phone uses Voice over IP technologies, allowing telephone calls to be made over an IP network such as the Internet instead of the ordinary PSTN system.

Calls can traverse the Internet, or a private IP Network such as that of a company.

The phones use control protocols such as Session Initiation Protocol, Skinny Client Control Protocol, or one of the various proprietary protocols such as Skype.

IP phones can be simple software-based Softphones or purpose-built hardware devices that appear much like an ordinary telephone or a cordless phone. Ordinary PSTN phones are used as IP phones with analog telephony adapters (ATA).

NEW QUESTION: 3

Which two contract types can be associated to Assets? (Choose two.)

- A. Labor
- B. Warranty
- C. Purchase
- D. Lease/Rental
- E. Master

Answer: B,D

NEW QUESTION: 4

Your company uses System Center 2012 Configuration Manager to distribute operating system images. The standard operating system for client computers is Windows 7 Enterprise (x86).

You receive 300 new desktop computers. Each computer has a new storage controller.

When you attempt to deploy an existing image to one of the computers, you receive an error message indicating that a storage device cannot be found during the pre-boot deployment phase.

You need to ensure that you can deploy Windows 7 to the new computers by using an image. What should you do?

- A. Update the existing x86 boot image to include the storage drivers.
- B. Create a new x64 boot image and configure the operating system image to use the x64 boot image.
- C. Create a new driver package and update the task sequence.
- D. Import the storage drivers to the Drivers container and update the task sequence.

Answer: A

Explanation:

Planning a Device Driver Strategy in Configuration Manager You can add Windows device drivers that have been imported into the driver catalog to boot images. Use the following guidelines when you add device drivers to a boot image:

*Add only mass storage and network adapter device drivers to boot images because other types of drivers are not generally required. Drivers that are not required increase the size of the boot image unnecessarily.

*Add only device drivers for Windows 7 to a boot image because the required version of Windows PE is based on Windows 7.

*Ensure that you use the correct device driver for the architecture of the boot image. Do not

add an x86 device driver to an x64 boot image.
